## KLIMA

### THE EFFICIENT CANE PRUNING SYSTEM

The Klima is a specialized cane pruning technology that drastically reduces pruning costs.

In many blocks where it has been used, the Klima has brought back cane pruning as a commercially viable option that increases fruit quality.

Machinery Logistics is one of only two companies in Western Australia who own the new Klima system. Having used the Klima since 2010 we have found it to be effective across a wide range of vineyards.

We have implemented the system in numerous vineyards that were previously spur pruned.

**The key benefits:**

- Can significantly reduce your cane pruning costs.
- Decreases pruning time and increases productivity of skilled labour.
- Reduces bud damage and cane breaks.
- Increase in safety to pruners.

“The transition to a predominantly machine-operated cane pruning system was not one we took lightly. As part of our due diligence we spoke with other vineyard managers & owners already using the Klima. Their praise for it, as well as for the high-quality service provided by Machinery Logistics, could not have been more accurate.

The combination of increased productivity, reduced cane and bud damage and lower labour charges has made our vineyard’s cane pruning significantly more cost-effective.”
