VINEYARD MANAGEMENT

TECHNICAL SERVICES

THE VITICULTURAL TECHNICAL EXPERTS

Viticultural Innovations offers a variety of technical services to help you manage your vineyard. Our technical officers are experts in pest monitoring and are highly trained in the collection and collation of technical data for vineyard health.

We can assist you with improving the quality, yield and long term sustainability of your vineyard through:

- Disease and Pest Monitoring: We regularly monitor your vineyard to assess pest and disease population levels.
- Data analysis: We have highly trained technical officers to collect and analyse vital data to determine your pruning and shoot thinning parameters.
- Reports: We provide an array of technical reports to assist with your integrated pest management strategies.
- Bud dissections: This provides critical information for setting pruning parameters to meet fruit production targets.
- Yield estimation: Our yield estimation service provides critical estimates and can monitor factors that influence the actual yield, such as bunch weight. Accurate yield estimation assists with the efficiency of vintage operations.
- Nutritional status: soil and vine analysis is available to assist with vine nutrition management.
- Maturity sampling: Our randomized sampling techniques using trained staff increases the accuracy of this data to assist in predicting optimum harvest time.
